

Micromounters of New England

The next regular meeting will take place on Saturday-September 25, 1976, at the home of Janet and Steve Caves, on Singletary Lane in Sudbury, Mass. (617-443-2339) from 10AM to 4PM.

There will be a representative selection of Francon micros available for view and study. The enclosed descriptive list of Francon minerals was supplied by John Stewart of B.U.. Anyone with Francon stuff from previous trips is encouraged to bring it for study and identification?? *The enclosed list was (Reel. Summ. Conf.) Ann Sabin's 1st article - (Paper 76-1B)*

Our next meeting will probably be in Connecticut in early November - arrangements are still incomplete.

If anyone has any new material acquired during the summer, why not bring it along for all to enjoy.

Check your Nova Scotia zeolite matrix for Barite!! While collecting zeolites along the Bay of Fundy, near Parrsboro, the Andersons' came across some unusual chabazite var. phacolite associated with color zoned plates of barite, from micro to one-eighth inch across.

Finally, last but not least, I wish to thank all those who helped in the micromount area at the recent Federation Show at Topsfield.

CALENDAR OF UPCOMING MICROMOUNT EVENTS:

September 17, 18, and 19: - Baltimore Micromount Symposium
c/o Randolph C. Rothschild
2909 Woodvalley Drive
Baltimore, Md. 21208
