

MICROMOUNTERS OF NEW ENGLAND

One of our new members has offered his place of buisness for a meeting. We accept; and thank you, Hal Krueger.

The next meeting will be held on Feb. 1st, 1975  
10A.M. to around 4P.M.

The place:- GEOCHRON LABS.

24 Blackstone St., Cambridge, Mass.

It's very easy to find, using the map shown below.

A part of the meeting will taken by our host, to explain in general terms some of the equipment and techniques used in his profession. This will surely be of interest to anyone "hooked" on minerals or geology.

had the

Several of the membership, real pleasure of meeting and listening to Dr. Paul Moore when he visited New England over the Holidays, either in Concord N. H., or Boston. His subject, pursued with infectuous inthusiasm, is Pegmatite Phosphates; and as would be expected, the Palermo Mine came in for special attention. So:- If anyone has unknowns, or doubtfuls from this prime source of rare phosphates, bring them along. Those of us who

were helped by Dr. Moore will be as helpful as possible, as if we didn't still need a lot of help ourselves.

As suggested at the last meeting, we are assessing dues at \$2.00 a head this year to shore up a depleted treasury. Dues can be paid at the meeting, or sent to Ralph Carr, 25 Farnum Rd. Warwick R. I. 02888

Promptness is urged so that an up-to-date membership list can be supplied with the next newsletter.

Your name will be taken off the membership list if we do not hear from you.

The Lab is on the 4th floor, and the elevator will probably not be available. Take it easy, and if anyone needs a little help, they'll have it, surely.

There are several eateries in the neighborhood; on bring along a lunch. Hal will have a large pot of coffee going.
